

Student:		Garvin Pierre									
	Asset Name	Brief Asset Description	Asset Location	Data Owner	Type of Data	RTO	RPO	Importance	Source	Destination	# of Users
1	Human Resources Management System(HRMS)	Employee benefits, personal info, performance evaluations, and etc. Oversees the entire employee lifecycle, acting as the safekeep of management and staff.	Server Rack A-Server A1	CFO-Rachel Xiong	PII	1: 1 hour	1: 4 hours	Very Important	Employee personnel files	Employee's lifestyle and company tracking	60: Employee's are limited to personal access
2	Enterprise Planning System(EPS) and Planning SQL DB	Contains crucial info embedded in files that withholds strategic planning for supporting the company and resource management.	Server Rack A-Server A2	CFO-Rachel Xiong	CC	1: 1 hour	1: 4 hours	Very Important	Companies resource and allocation managemnet	Budgets, strategic goals, and productivity maximization.	15
3	Financial Management System(FMS) and FMS SQL DB	Withholds a system that prioritizes accounting systems for overall ledger, accounts payable, and accounts receivable.	Server Rack A-Server A3	CFO-Rachel Xiong	PCI	0: 30 mins	1: 4 hours	Very Important	Companies accounting intel	Cost savings, company growth, and profitability	21
4	Project Management and Project Systems(PMPS) and PMPS SQL DB	Provides support for planning, organizing, structuring, and executing company tasks.	Server Rack A-Server A4	CFO-Rachel Xiong	PCI	2: 8 hours	4: 2 days	Important	Companies planning support info	Strategic decision making, companies roadmap, and department integration	15
5	Enterprise Time and Labor System(ETLS) and ETLS SQL DB	Contains knowledge that revolves around managerial and employee time management including salaried and hourly employee time tracking and PTO.	Server Rack A-Server A5	CFO-Rachel Xiong	PII	4: 2 days	5: 1 week	Important	Employee's hours and planned payment	Fair compensation, cost control, and employee morale/retention	60: Employee's are limited to personal access
6								#REF!			
7	Enterprise Sales System(ESS) and ESS SQL DB	Contains info for customer contracts, sales support, and customer/supplier support	Server Rack B-Server B1	COO-Grace Williams	CC,PCI	2: 8 hours	2: 8 hours	Important	Customer's orders, business contracts, and item procurement	Inventory count, revenue count, and customer info	18
8	Supplier Relationship System(SRS) and SRS SQL DB	Info that provides live tracking for supplier product updates and makes sure to upkeep relationship upkeeping	Server Rack B-Server B2	COO-Grace Williams	CC	4: 2 days	4: 2 days	Important	Supplier's shipping info and reviews from their business with the company.	Used for supplier reliability and most loyal customers. Can also be used to show trust in product shipping	18
9	Microsoft SharePoint Server(MSSPS) and MSSPS SQL DB	Employee files are stored locally and synced in OneDrive, centrally managed in Sharepoint SQL, and wiped daily on logout.	Server Rack B-Server B3	COO-Grace Williams	PII	1: 1 hour	3: 1 day	Important	All files that are worked on throughout the day and shared between each employee	Company upkeeping, easy communication, and vital info safekeeping	60
10	Helpdesk Application(HDA) and HAD SQL DB	A customer support specialization and helpdesk application that deals with external problems that deal with orders, shipping, and receipt issues.	Server Rack B-Server B4	COO-Grace Williams	CC	4: 2 days	4: 2 days	Very Important	Tallied customer help requests throughout the week.	Customer satisfaction, report frequency, and company sufficiency score.	60
11								#REF!			
12	B3S1 Corporate Web Server(Web) with web pages data	Deals with the companies public websites and customer redirection emebdedd in these websites to simplify consumer needs, wants, and etc.	Server Rack C-Server C1	CIO-Paul Alexander	PCI, PII	2: 8 hours	2: 8 hours	Somewhat Important	Originates from users interacting with the company's public web forms	Job applications, Communication, Customer Inquiries, and company connections.	18
13	Primary DNS Server(PDNS) and associated PDNS records/files	Translates domain names into IP addresses and ensures reliable access to internal and external resources by providing Domain Name Services for the organization.	Server Rack C-Server C2	CIO-Paul Alexander	CC,PCI	2: 8 hours	3: 1 day	Very Important	From the networks infrastructure and records from the IT team	Employee and customer access, systems reliability, and network traffic management	18
14	Windows Active Directory Server(ADS) and internal ADS database	Windows Active Directory manages authentication, controls employee access to applications and services, and maintains an internal directory database separate from SQL systems.	Server Rack C-Server C3	CIO-Paul Alexander	PII,	1: 1 hour	2: 8 hours	Very Important	From the company's data created and maintained by IT admin.	User login systems, network resources, and security permissions	18
15	VPN remote access system(VPN)	Enables secure remote access for executives and IT staff, authenticating through Active Directory, without storing internal data or maintaining its own database.	Server Rack C-Server C4	CIO-Paul Alexander	FERPA	3: 24 hours	3: 1 day	Important	The company's VPN system and network infrastructure.	Business continuity, IT administration, and remote employee access	18

Garvin Pierre								
Decision Matrix for Asset Valuation								
	Criteria	Accuracy	Consistency	Timeliness	Completeness	Validity		
	Criteria weights							
#	Information Asset	0.2	0.2	0.2	0.2	0.2	TOTAL (1.0)	Importance
1	Financial Management System(FMS) and FMS SQL DB	5	4	3	4	4	4	Very Important
2	Human Resources Management System(HRM)	3	3	5	5	3	3.6	Very Important
3	Enterprise Planning System(ERP) and Planning SQL DB	5	3	3	4	3	3.6	Very Important
4	Enterprise Time and Labor System(TLS) and TLS SQL DB	4	3	2	3	3	3	Important
5	Project Management and Project System(PMP) and PMP SQL DB	3	3	3	3	2	2.8	Important
6	Helpdesk Applications(HDA) and HAD SQL DB	4	3	4	2	3	3.2	Very Important
7	Supplier Relationship System(SRS) and SRS SQL DB	3	2	3	2	3	2.6	Important
8	Enterprise Sales System(ESS) and ESS SQL DB	3	2	2	3	2	2.4	Important
9	Microsoft SharePoint Server(MSPS) and MSPS SQL DB	2	2	2	3	2	2.2	Important
10								
11	Windows Active Directory Server(ADS) and internal ADS database	4	3	4	3	2	3.2	Very Important
12	Primary DNS Server(PDNS) and associated PDNS records/files	3	4	3	3	3	3.2	Very Important
13	VPN remote access system(VPN)	4	3	3	2	3	2.6	Important
14	B3SI Corporate Web Server(Web) with web pages data	2	2	2	1	2	1.6	Somewhat Important
15								

0	1	Not Important
1.01	2	Somewhat Important
2.01	3	Important
3.01	4	Very Important
4.01	5	Critically Important

Accuracy I chose accuracy because being accurate is a big part of running a company. A weight of 2 was selected for this criterion because I wanted to keep all values the same.

Consistency I chose consistency because it ensures uniformity. A weight of 2 was selected for this criterion because it determines the work ethic of the company.

Timeliness I chose timeliness because it directly impacts decision making. A weight of 2 was selected for this criterion because some things can be late but it's best to have everything ASAP.

Completeness I chose completeness because it allows each branch to be fully informed. A weight of 2 was selected for this criterion because mistakes usually reside in missing data.

Validity I chose validity because it ensures data specification. A weight of 2 was selected for this criterion because without validity there's no accuracy.

On Risk Threshold

	Assets	Policy	BI/DR Plan	Employee Training	Data Backup Plan	Redundant Server	Likelihood	Impact	Risk	
1	Human Resources Management System(HRMS)	Yes	Yes	Yes	In Progress	Yes	3	5	15	Likelihood: because employee confidentiality should be the most important thing to a company. Impact: because with this exposure the attacker's have increased leverage over the company.
2	Enterprise Planning System(ERP) and Planning SQL DB	In Progress	Yes	In Progress	In Progress	No	2	2	4	Likelihood: because most attackers aren't looking for company's future plans but more for their financial statuses. Impact: because this will not leave a dent in production for an extended period of time.
3	Financial Management System(FMS) and FMS SQL DB	Yes	Yes	Yes	Yes	Yes	4	4	16	Likelihood: because need to company's personnel info, profit is next to their most vital asset. Impact: because how can a company operate without it's revenue or with it being in the hands of attackers.
4	Project Management and Project System(PMP) and PMP SQL DB	Yes	In Progress	Yes	In Progress	No	1	2	2	Likelihood: because attackers are even less likely to attack project management than they are to attack company planning. Impact: because this is a very finance back factor in business. Here's in a good business are common.
5	Enterprise Time and Labor System(ETS) and ETS SQL DB	Yes	Yes	Yes	Yes	Yes	4	3	12	Likelihood: the valuable data such as employee names, payroll, and work emails. Impact: because depending on what they obtain it could be detrimental to the company, such as login credentials.
6		0					0	0	0	
7	Enterprise Sales System(ESS) and ESS SQL DB	No	Yes	No	In Progress	No	1	2	2	Likelihood: because sales support and product orders are not a big target. Impact: Low because there are easily re-observable.
8	Supplier Relationship System(SRS) and SRS SQL DB	In Progress	Yes	Yes	In Progress	No	3	3	9	Likelihood: because their not as attractive as customer data systems. Impact: because these systems can be used as a backdoor into better systems.
9	Microsoft SharePoint Server(MSSP) and MSSP SQL DB	Yes	Yes	Yes	In Progress	In Progress	2	2	4	Likelihood: because this server has an automatic wipe feature at the end of each day. Impact: because there are penetration implemented already and sensitive is one of the first things shown in a tech job. With proper employee control these files should not be in danger.
10	Helpdesk Application(HDA) and HDA SQL DB	In Progress	Yes	No	In Progress	In Progress	4	3	12	Likelihood: because it contains store customer and internal user data. Impact: This could be a factor of privacy breach, a way to manipulate IT tickets, or gain insight into system vulnerabilities.
11		0					0	0	0	
12	B2B Corporate Web Server(WWS) with web pages/data	No	In Progress	In Progress	Yes	Yes	2	3	6	Likelihood: because it's the software can be exploited and attackers can scan for weaknesses. Impact: because data interception is possible and website defacement is a threat.
13	Primary DNS Server(PDS) and associated DNS records/files	Yes	In Progress	No	In Progress	In Progress	3	4	12	Likelihood: because this could be frequently targeted for DDoS attacks or crippling the company's network. Impact: because this could lead to undesignated service outages or traffic hijacking.
14	Windows Active Directory Server(ADS) and internal ADS database	Yes	Yes	Yes	Yes	Yes	4	5	20	Likelihood: because it controls authentication for the entire organization. It's also constantly targeted through weak password policies and phishing. Impact: because attackers would be able to log in as any user (including admin), therefore acquire their access to all systems and data.
15	VPN remote access system(VPN)	In Progress	Yes	In Progress	Yes	Yes	4	4	16	Likelihood: because VPN's are widely-scanned by attackers and are common targets for high-value accounts. Impact: because attackers can gain access to sensitive systems, bypass defenses, and operate within the network.

Student: Garvin Pierre

Org Risk Threshold		10			Risk Controls						
Assets	Current Risk	Risk Treatment	Policy	IR/DR Plan	Employee Training	Data Backup Plan	Redundant Server	New Likelihood	New Impact	Projected Risk	
1 Human Resources Management Sytem(HRMS)	15	Mitigate	Enhance	Enhance	Enhance	Enhance	Enhance	4	5	20	I selected this new likelihood because VPN's relies on active directory an attackers try this as a first attack point. I selected this new impact because a compromise would allow acces to perimeter defenses.
2 Enterprise Planning System(EPS) and Planning SQL DB	4	Accept	Enhance	Enhance	Enhance	Enhance	Enhance	3	3	9	I selected this new risk likelihood because it requires attackers to already be inside the network and it has fewer entry points. I selected this new impact because even if compromised, it doesn't give immediate network-wide acces.
3 Financial Management System(FMS) and FMS SQL DB	16	Mitigate	Enhance	Enhance	Enhance	Enhance	Enhance	5	4	20	I selected this new likelihood because financial systems are a top target for attackers. Their direct motivation is usually money. I selected this new impact because if compromised they'd be able to commit fraud and manipulate records.
4 Project Management and Project Systems(PMPS) and PMPS SQL DB	2	Accept	Enhance	Enhance	Enhance	Enhance	Add	2	3	6	I selected this new likelihood because it's usually only reachable after another system is compromised, it's usually more of a second target. I selected this new impact because it doesn't control authentication, provide financial gain, or cause catastrophic disruption.
5 Enterprise Time and Labor Sytem(ETLS) and ETLS SQL DB	12	Mitigate	Enhance	Enhance	Enhance	Enhance	Enhance	4	4	16	I selected this new likelihood because it's used by all employee's and it's tied to login credentials. I selected this new impact because attackers can mainpulate timesheets in worst cases, access employee data.
6	0	0						0	0	0	
7 Enterprise Sales System(ESS) and ESS SQL DB	2	Accept	Add	Enhance	Add	Enhance	Add	2	2	4	I selected this new likelihood because it's a hard asset for attackers to reach it. I selected this impact because the data is not highly sensitive and it has no direct correlation to authentication systems.
8 Supplier Relationship System(SRS) and SRS SQL DB	9	Accept	Enhance	Enhance	Enhance	Enhance	Add	3	4	12	I selected this new likelihood because it can increase exposure to supply chain attacks. I selected this new impact because it can cause disruption in supply chain operations or manipulate supplier data or orders.
9 Microsoft SharePoint Server(MSSPS) and MSSPS SQL DB	4	Accept	Enhance	Enhance	Enhance	Enhance	Enhance	2	4	8	I selected this new likelihood because this system primarily supports supplier tracking and has no direct financial control. I selected this new impact because it doesn't contain highly sensitive personal or customer data.
10 Helpdesk Application(HDA) and HAD SQL DB	12	Mitigate	Enhance	Enhance	Add	Enhance	Enhance	4	4	16	I selected this new likelihood because it's public facing as in customers submitting tickets and can be frequently targeted. I selected this impact because that's immediate access to customer data.
11 B3SI Corporate Web Server(Web) with web pages data	6	Accept	Add	Enhance	Enhance	Enhance	Enhance	4	4	16	I selected this new likelihood because it's highly exposed to external users. I selected this impact because those attackers have the ability to gamage brand trust or credibility.
12 Primary DNS Server(PDNS) and associated PDNS records/files	12	Mitigate	Enhance	Enhance	Add	Enhance	Enhance	5	4	20	I selected this new likelihood because it's constantly targeted by DNS spoofing and cache poisoning. I selected this impact because users can be redirected to malicious websites and and company services can become unavailable.
13 Windows Active Directory Server(ADS) and internal ADS database	20	Mitigate	Enhance	Enhance	Enhance	Enhance	Enhance	4	5	20	I selected this new likelihood because it's a central point for authentication and access control. I selected this impact because it can lead to full network compromise or loss of control over the entire environment.
14 VPN remote access system(VPN)	16	Mitigate	Enhance	Enhance	Enhance	Enhance	Enhance	4	4	16	I selected this new likelihood because it's a common attack for exploiting VPN software or phishing for VPN logins. I selected this new impact because it allows the attacker to act as a legitimate user and allow for direct point entry.
